**DETAILED ACTION**

***Priority***

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

***Claim Rejections - 35 USC § 112***

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 1-17 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 is indefinite because it is unclear if the stator recited in line 6 is the same as the stator recited in line 7.

***Claim Rejections - 35 USC § 102***

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1-9 and 11-22 are rejected under 35 U.S.C. 102(b) as being anticipated by Wurst (US 4,651,591).

Wurst discloses a robot wrist for an industrial robot, said robot wrist comprising a wrist housing (29) and a wrist part, here designated tilt, journaled at the wrist housing, wherein the tilt is rotatable relative to the wrist housing about an axis of rotation and

comprises a drive unit comprising a motor (M) with a motor housing, wherein a shell part of the motor housing is designed to connect the tilt to the wrist housing (see Fig 2), wherein the motor comprises a stator (20) and a rotor (18) arranged in the motor housing, wherein the motor housing comprises an opening (unnumbered, covered by 39) adapted to allow insertion of the stator into the motor housing, and wherein the motor housing comprises a sealing member adapted to seal the opening (see Fig 2), the tilt comprises a first part that is rotatable relative to the wrist housing about a first axis of rotation, and a second part that is connected to the first part and designed to support a toolholder and that is rotatable relative to the first part about a second axis of rotation (see Fig 2), the outside of the shell part is designed to connect the tilt to the wrist housing (see Fig 2), the stator makes contact with the inside of the shell part (see Fig 2), the sealing member comprises a front portion adapted to be received inside the shell part (see Fig 2).

### ***Conclusion***

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
